Introductions

What brought you to this workshop?

Please download the
PollEverywhere app

What word comes to mind when you think of Marine Energy?

The screenshot shows a mobile application interface for a poll. At the top, there is a navigation bar with a bar chart icon, a back arrow, the text 'Activities', and buttons for 'Visual settings', 'Edit', and navigation arrows. Below the navigation bar is a sidebar with icons for a list, a poll, and a share function. The main content area features a poll card with a blue circular icon containing a white poll symbol, the text 'When poll is active respond at PollEv.com/marleykaplan533', and a QR code. The poll question is 'What word comes to mind when you think of marine energy?'. Below the question is a word cloud with the following words: opportunity, tides, current, wind, sea, power, tidal, renewable, waves, aquaculture, sustainable, otec, wave, and immeasurable. The words 'wind' and 'waves' are the largest and most prominent in the cloud.

Objectives of the Workshop

1. Describe environmental and social effects of marine energy and how they differ from those of offshore wind
2. Walk through a fictional tidal energy use case in Massachusetts
3. Answer questions and discuss marine energy projects

Agenda

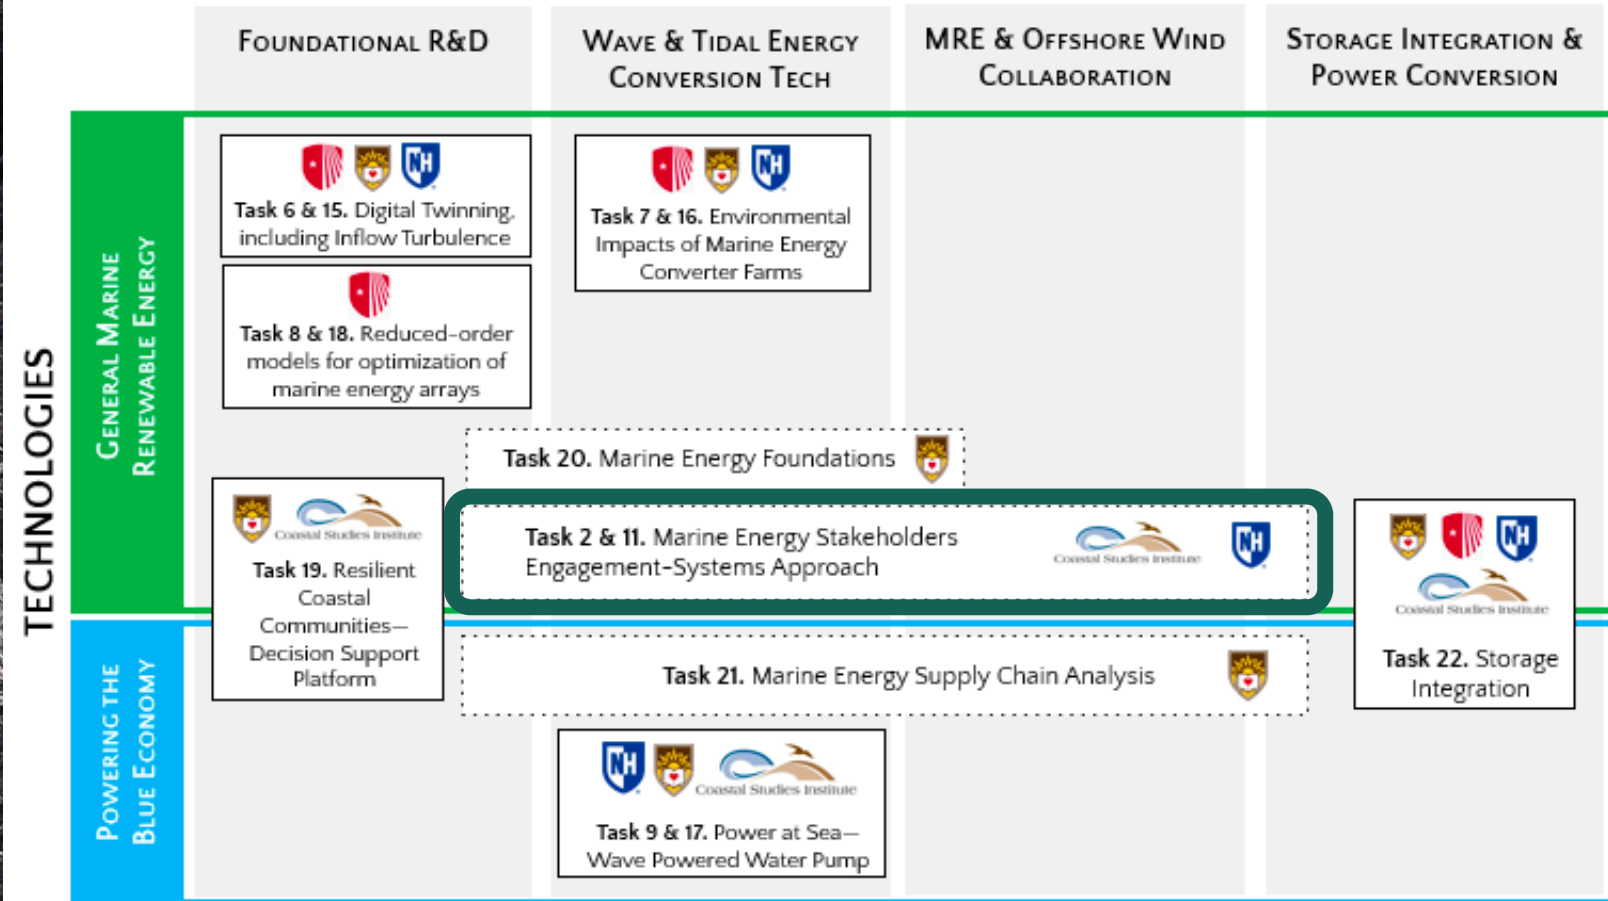

Start Time	Agenda Topic
1:00	Arrivals
1:15	Introductions, objectives of the workshop
1:30	Marine energy environmental effects, and stakeholder engagement
2:30	Break
2:45	Tidal use case presentation
3:00	Group discussions
4:15	Conclusion

Introduction to marine energy

Atlantic Marine Energy Center

R&D TOPICS

University of New Hampshire

Stony Brook University

Lehigh University

Coastal Studies Institute

Develop a focused outreach and engagement process around the science of what we know about environmental and social effects of marine energy development

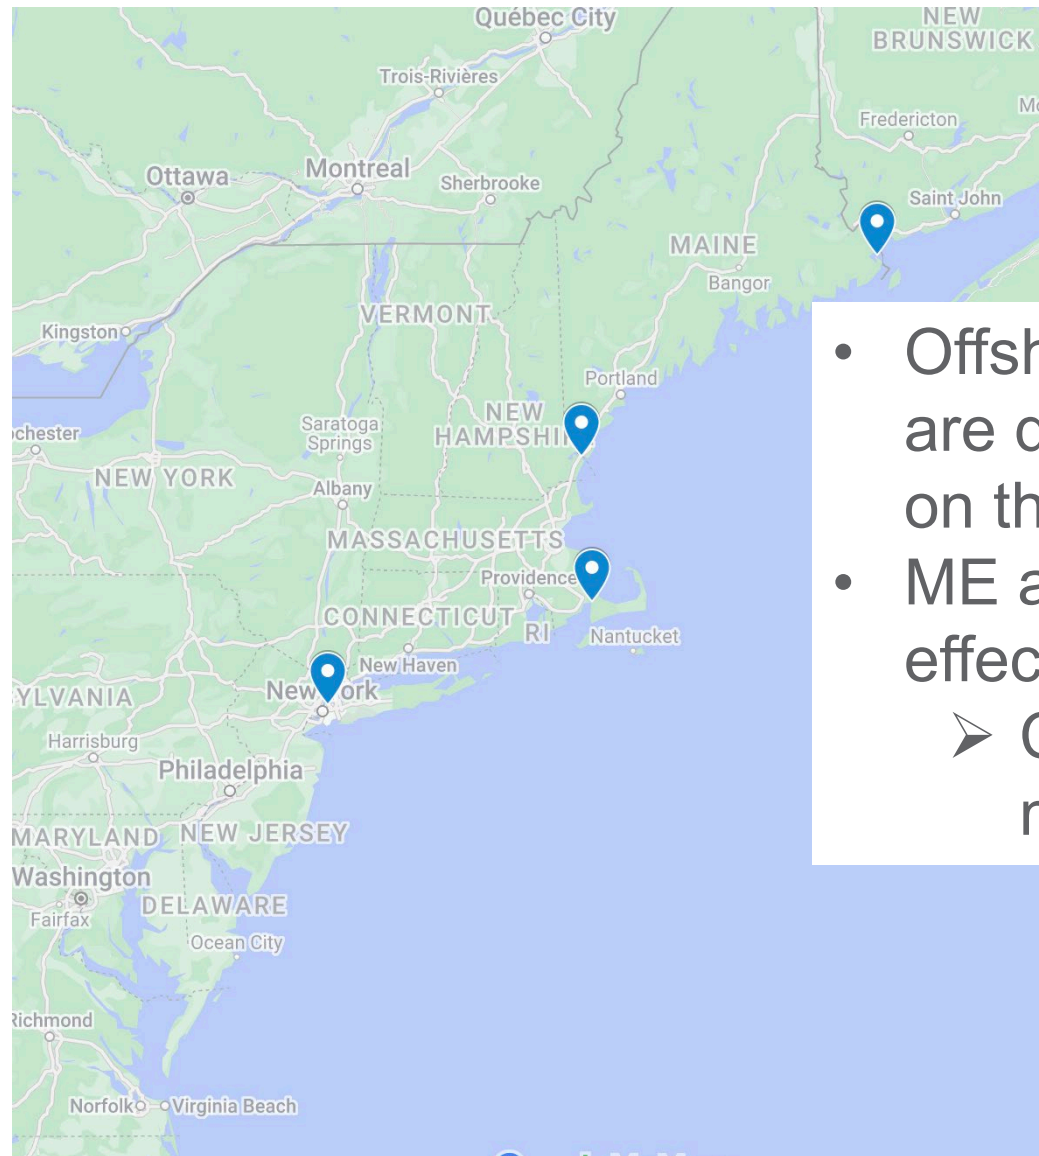

OES-Environmental

- Established by the IEA - Ocean Energy Systems in 2010
- Led by the U.S. DOE Water Power Technologies Office and implemented by Pacific Northwest National Laboratory
- 16 member countries for Phase 4
- Examines environmental effects of marine energy development to advance the industry in a responsible manner
- Publishes syntheses of the current available knowledge on environmental effects (e.g., State of the Science reports)

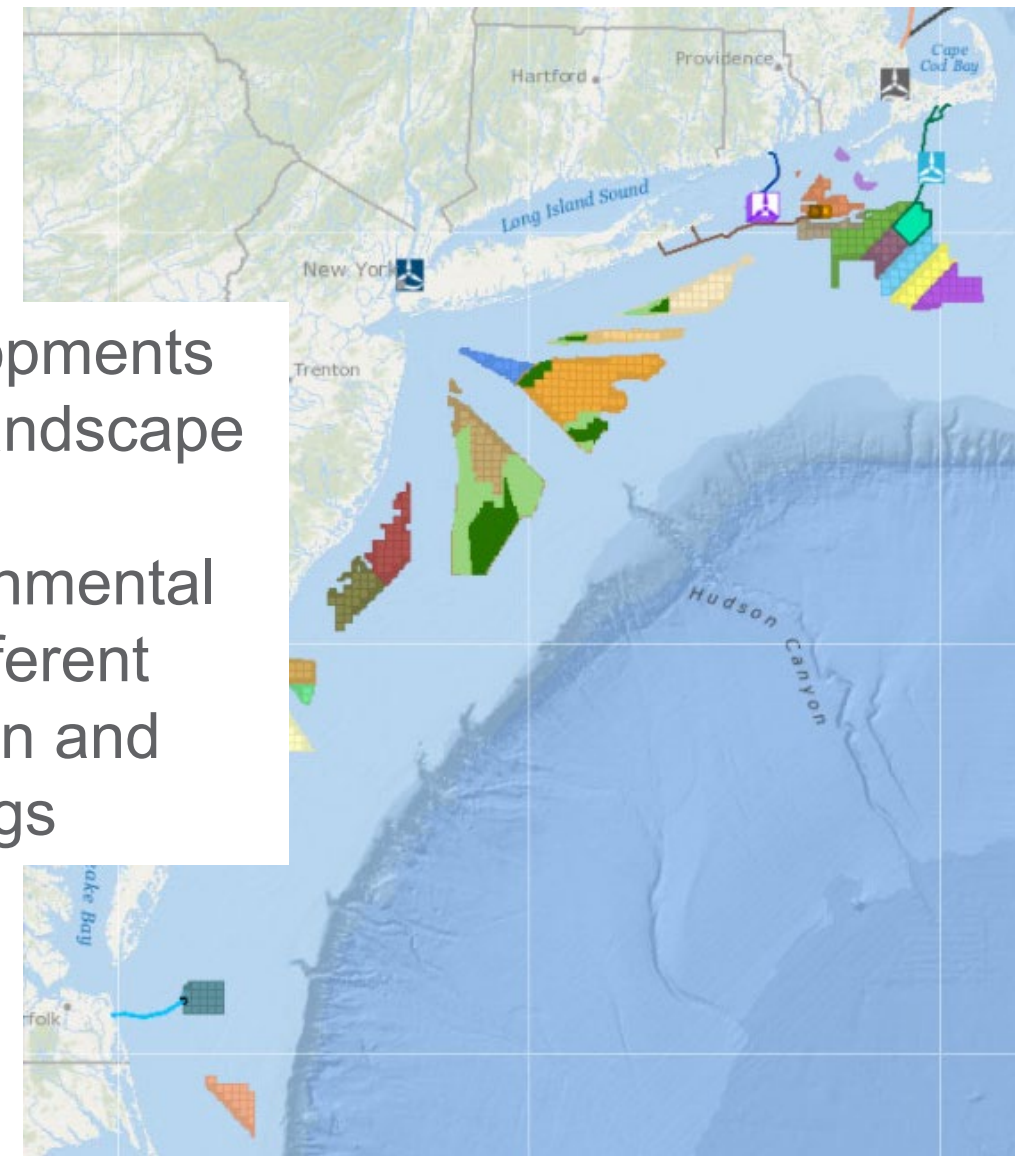

U.S. East Coast offshore energy context

Existing marine energy (ME) sites

Offshore wind (OSW) lease areas

- Offshore wind developments are dominating the landscape on the East Coast
- ME and OSW environmental effects similar but different
 - Creates confusion and misunderstandings

Marine Energy

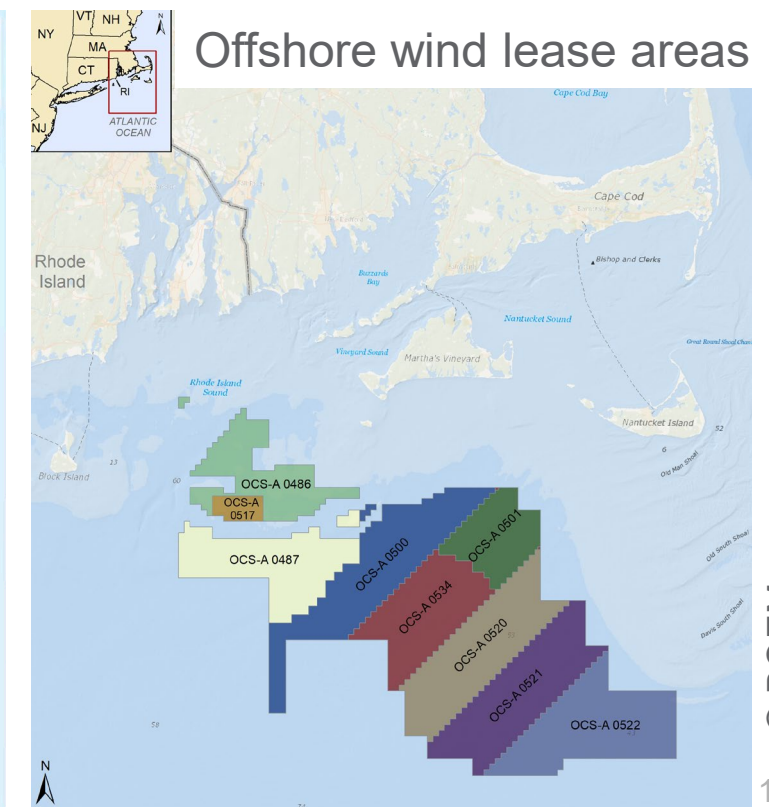

- Energy harnessed from the movement of ocean water or large rivers and from ocean gradients:
 - ✓ Waves
 - ✓ Tides
 - ✓ Ocean currents
 - ✓ River flow
 - ✓ Temperature gradients
 - ✓ Salinity gradients
- Early stages of development, deployment, and commercialization
- Environmental concerns continue to slow permitting processes worldwide
- Marine energy does not include offshore wind

Challenges for marine energy development

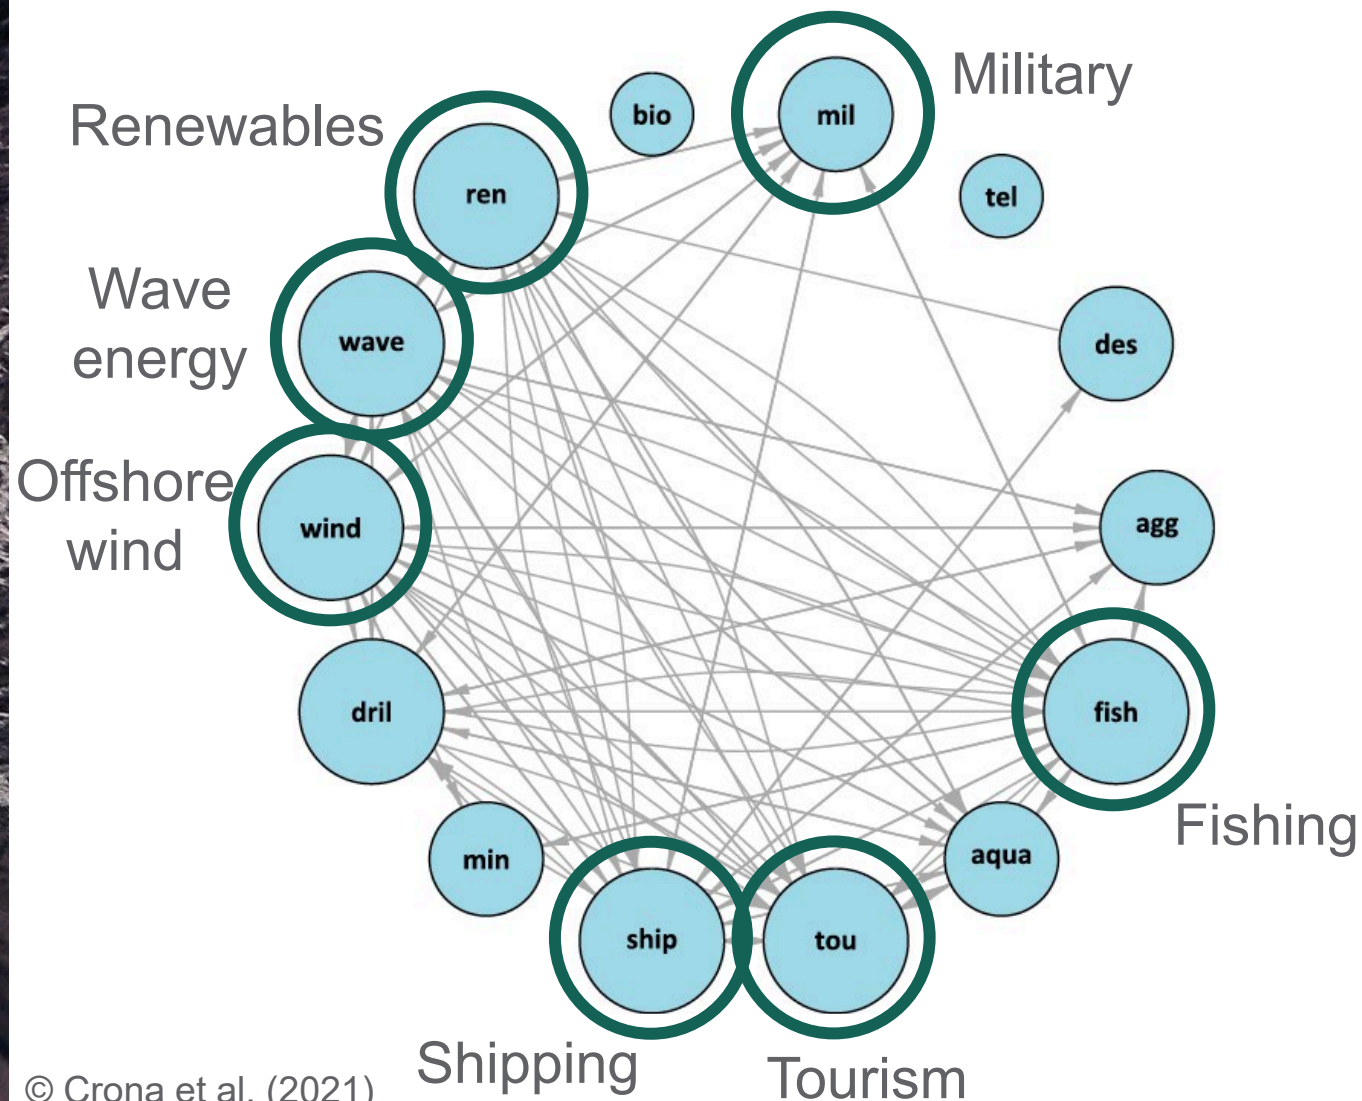

The ocean is a busy space

- Lots of human activities at sea
- Often overlapping, sometimes conflicting uses
- Increase in ocean activities with potential for new interactions or conflicts

Challenges for marine energy development

The ocean is a busy space

Engaged communities can

- Separate perceived risks from actual risks
- Distinguish issues specific to marine energy
- Participate in decision-making processes

Important to disseminate relevant and accessible information

Marine Energy Environmental and Social Effects

Marine energy environmental effects

Stressors: marine energy devices and systems that may cause harm

Receptors: marine animals, habitats, ecosystem processes

Priority stressor-receptor interactions

Collision risk

Mooring line encounters

Underwater noise

Changes in oceanographic systems

Electromagnetic fields

Habitat changes

Displacement / barrier effects

Collision Risk

CONCERN:

- Risk of tidal turbines' rotating blades causing injury and/or death to marine mammals, fish, sea turtles, and diving seabirds

KNOWLEDGE:

- No observations of marine mammal or seabird colliding with a device
- Observations of fish interactions have shown no harm
- Technologies to observe collision not well developed, difficult to operate in high-energy environments
- Collision risk examines individual animals, but need to put in context of risk to populations

Underwater Noise

CONCERN:

- Potential disruption of marine animal navigation, communication
- Could cause physical harm and/or behavioral changes
- Marine mammals and certain fish species

KNOWLEDGE:

- Marine energy devices may add to anthropogenic sounds and disturb animals
- Have international specification for measuring marine energy device noise
- So far noise from turbines and wave energy converters fall below U.S. underwater noise thresholds
- Noise propagation models not validated in high energy environments

Electromagnetic Fields (EMF)

CONCERN

- EMF from cables may affect organisms that use natural electric or magnetic fields for orientation, navigation, and/or hunting

KNOWLEDGE:

- Marine energy-related EMFs come from power cables, devices' moving parts, substations/transformers
- Power cables can be buried in sediment, separating animals from EMF
- Lab and field studies have shown little evidence of behavioral effect on aquatic species, no expected harm

Habitat Changes

CONCERN:

- Changes in benthic and pelagic habitats, artificial reef effect, colonization or patterns of species succession due to presence of marine energy devices and parts

KNOWLEDGE:

- Can learn from other offshore industries
- Footprint of devices and anchors are small on seafloor
- Mooring lines and floats in water column
- Devices attract fish and invertebrates, but no mechanism of harm
- Careful siting of devices can minimize risk

Mooring Line Encounters

CONCERN:

- Entanglement or entrapment of animals (marine mammals, sea turtles) with mooring lines/cables
- Potential to entangle fishing gear, further entanglement of animals

KNOWLEDGE:

- Concerns arise due to entanglement in lost fishing gear
- No free end of lines, insufficient slack to allow looping
- Scales do not match, entanglement highly unlikely

Changes in Oceanographic Systems

CONCERN:

- Changes in circulation, wave height, sediment transport
- Secondary changes in water quality, ecosystem processes

KNOWLEDGE:

- Changes from single devices or small arrays appear immeasurably small
- Numerical models suggest changes may be measurable only with very large arrays

Displacement

CONCERN:

- Arrays of devices may displace marine animals from migration routes or essential (feeding, rearing, mating, etc.) habitats
- Potential for a range of consequences, from effects on individuals to populations

KNOWLEDGE:

- Outcome of 1 of 3 mechanisms (i.e., attraction, avoidance, and exclusion) triggered by a receptor's response to one or more stressors
- No field studies that address displacement of marine animals around marine energy arrays
- Identification of species potentially at risk of displacement is important during project planning

Socio-economic Effects

- Any potential social and economic impacts of MRE development
- Often overlooked during planning, permitting, and developing processes
- Need for more social and economic data collection
- Lack of information on methodology

Information for stakeholder engagement

For the AMEC region:

- Develop use cases in New England and North Carolina
- Hold in-person and virtual workshops and webinars to foster discussion amongst stakeholders
- Address similarities and differences between marine energy and offshore wind environmental effects
- Highlight extensive resources available on marine energy environmental effects and permitting

Break

Tidal Use Case

Leveraging marine energy use cases

Objectives

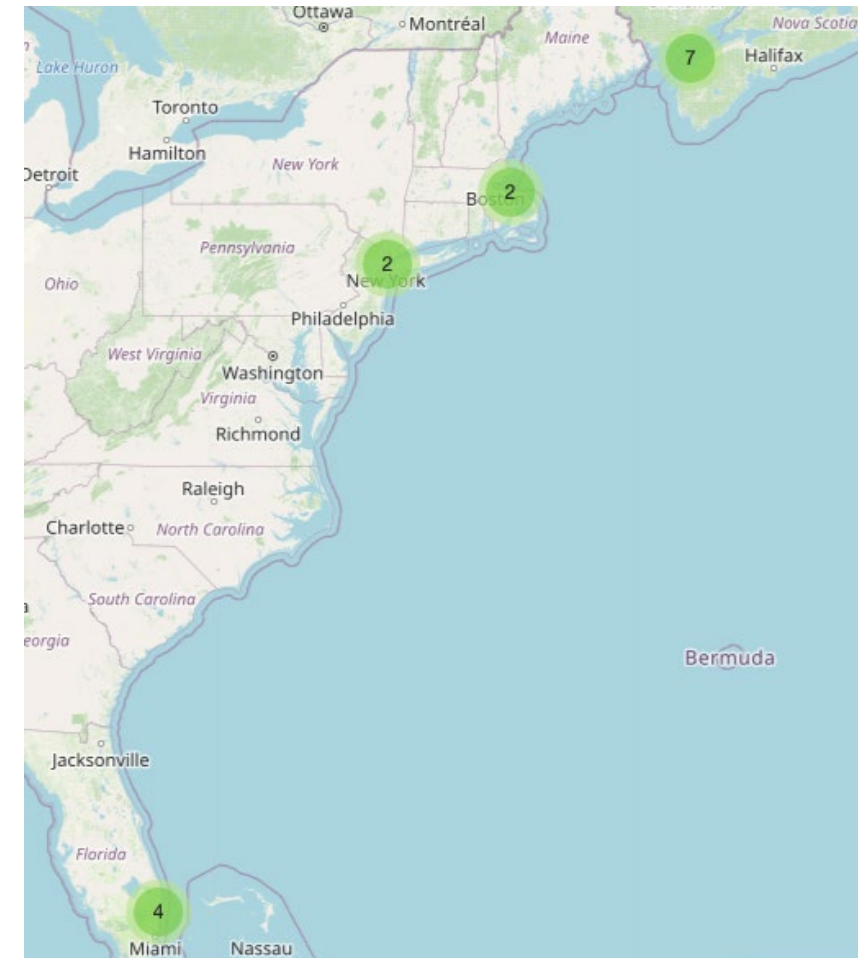

- Understand the marine energy landscape on the U.S. Atlantic coast
- Share targeted information with the stakeholders

Process

- Review of past, present, and planned projects
- Identification of stakeholders involved in planning and permitting processes
- Identification of environmental issues
- Identification of user/stakeholder concerns

Results

- Tidal energy use case in New England
- Wave energy use case in North Carolina

New England marine energy use case

Hypothetical array of 6 bottom-mounted tidal turbines in Muskeget Channel, MA

- Channel with strong ebb-dominated tidal flows
- Mainly gravel seabed
- Grid connection on Martha's Vineyard
- 1 MW turbines with tip speed 15 m/sec
- Underwater noise emission 50-1000 Hz

Use case receptors of concern

North Atlantic
Right Whales

Harbor
Porpoises

Killer whales

Harbor Seals

Sea Turtles
(Leatherback,
Loggerhead,
Green, Kemp's
Ridley)

Ocean Sunfish

Grey Seals

Basking
Sharks

Great White
Sharks

Eelgrass and
Microalgae Beds

Use case stakeholder concerns

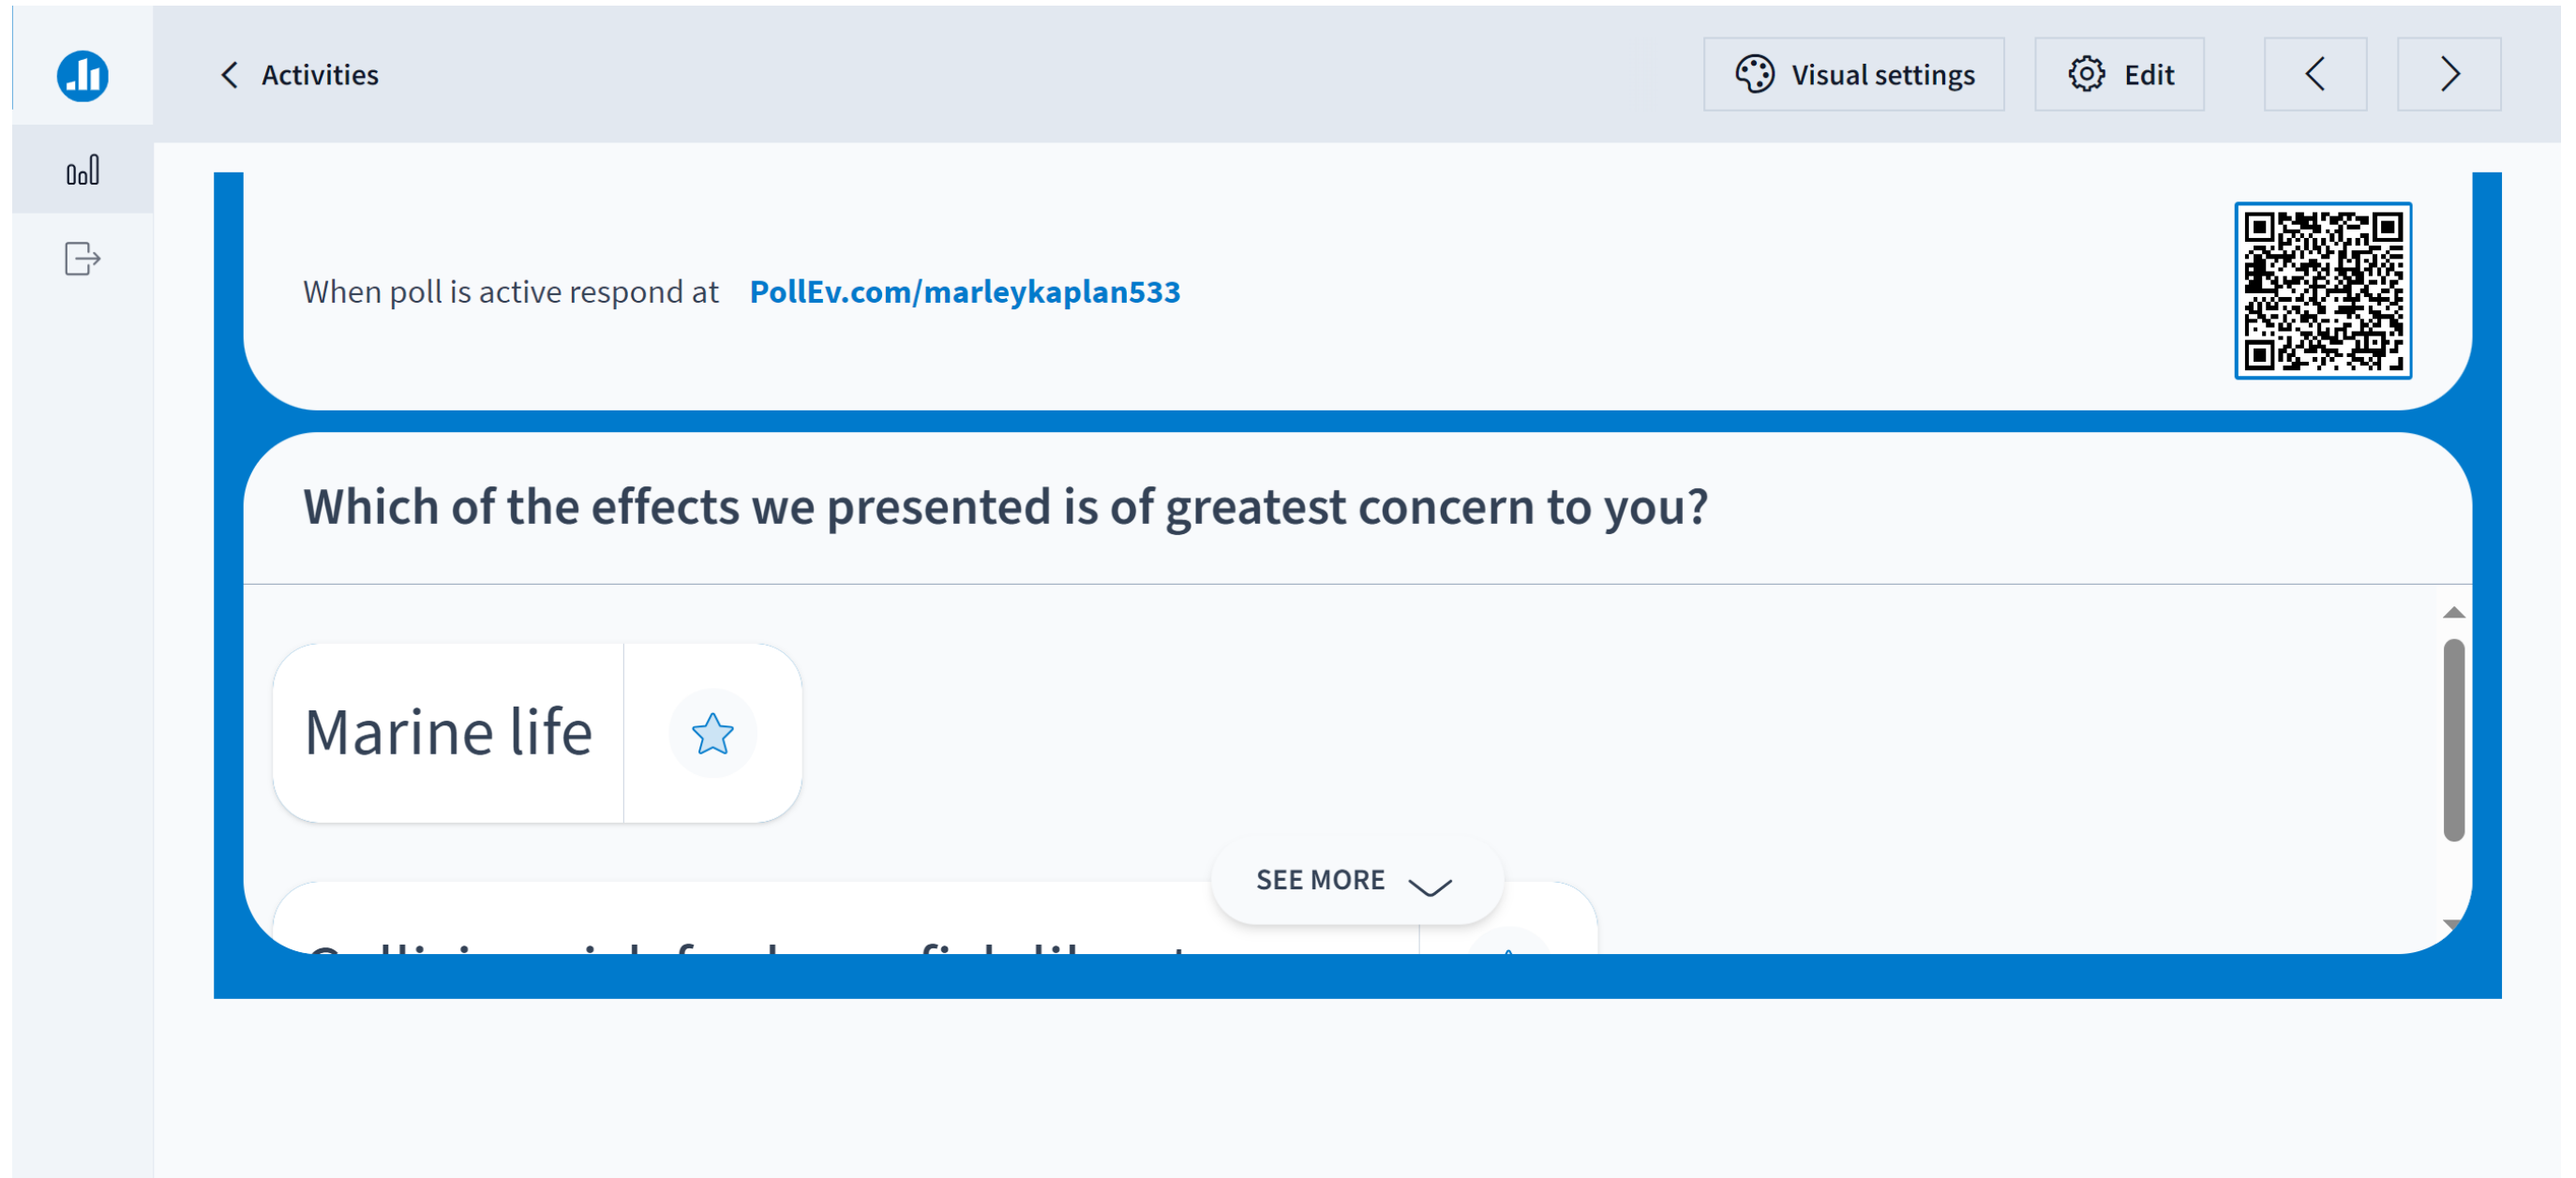

- Fishers' access to traditional fishing sites
- Disrupting vessel navigation and traffic
- Potential disturbance of cultural artifacts
- Collision risk
- Underwater noise
- Electromagnetic fields

Discussion

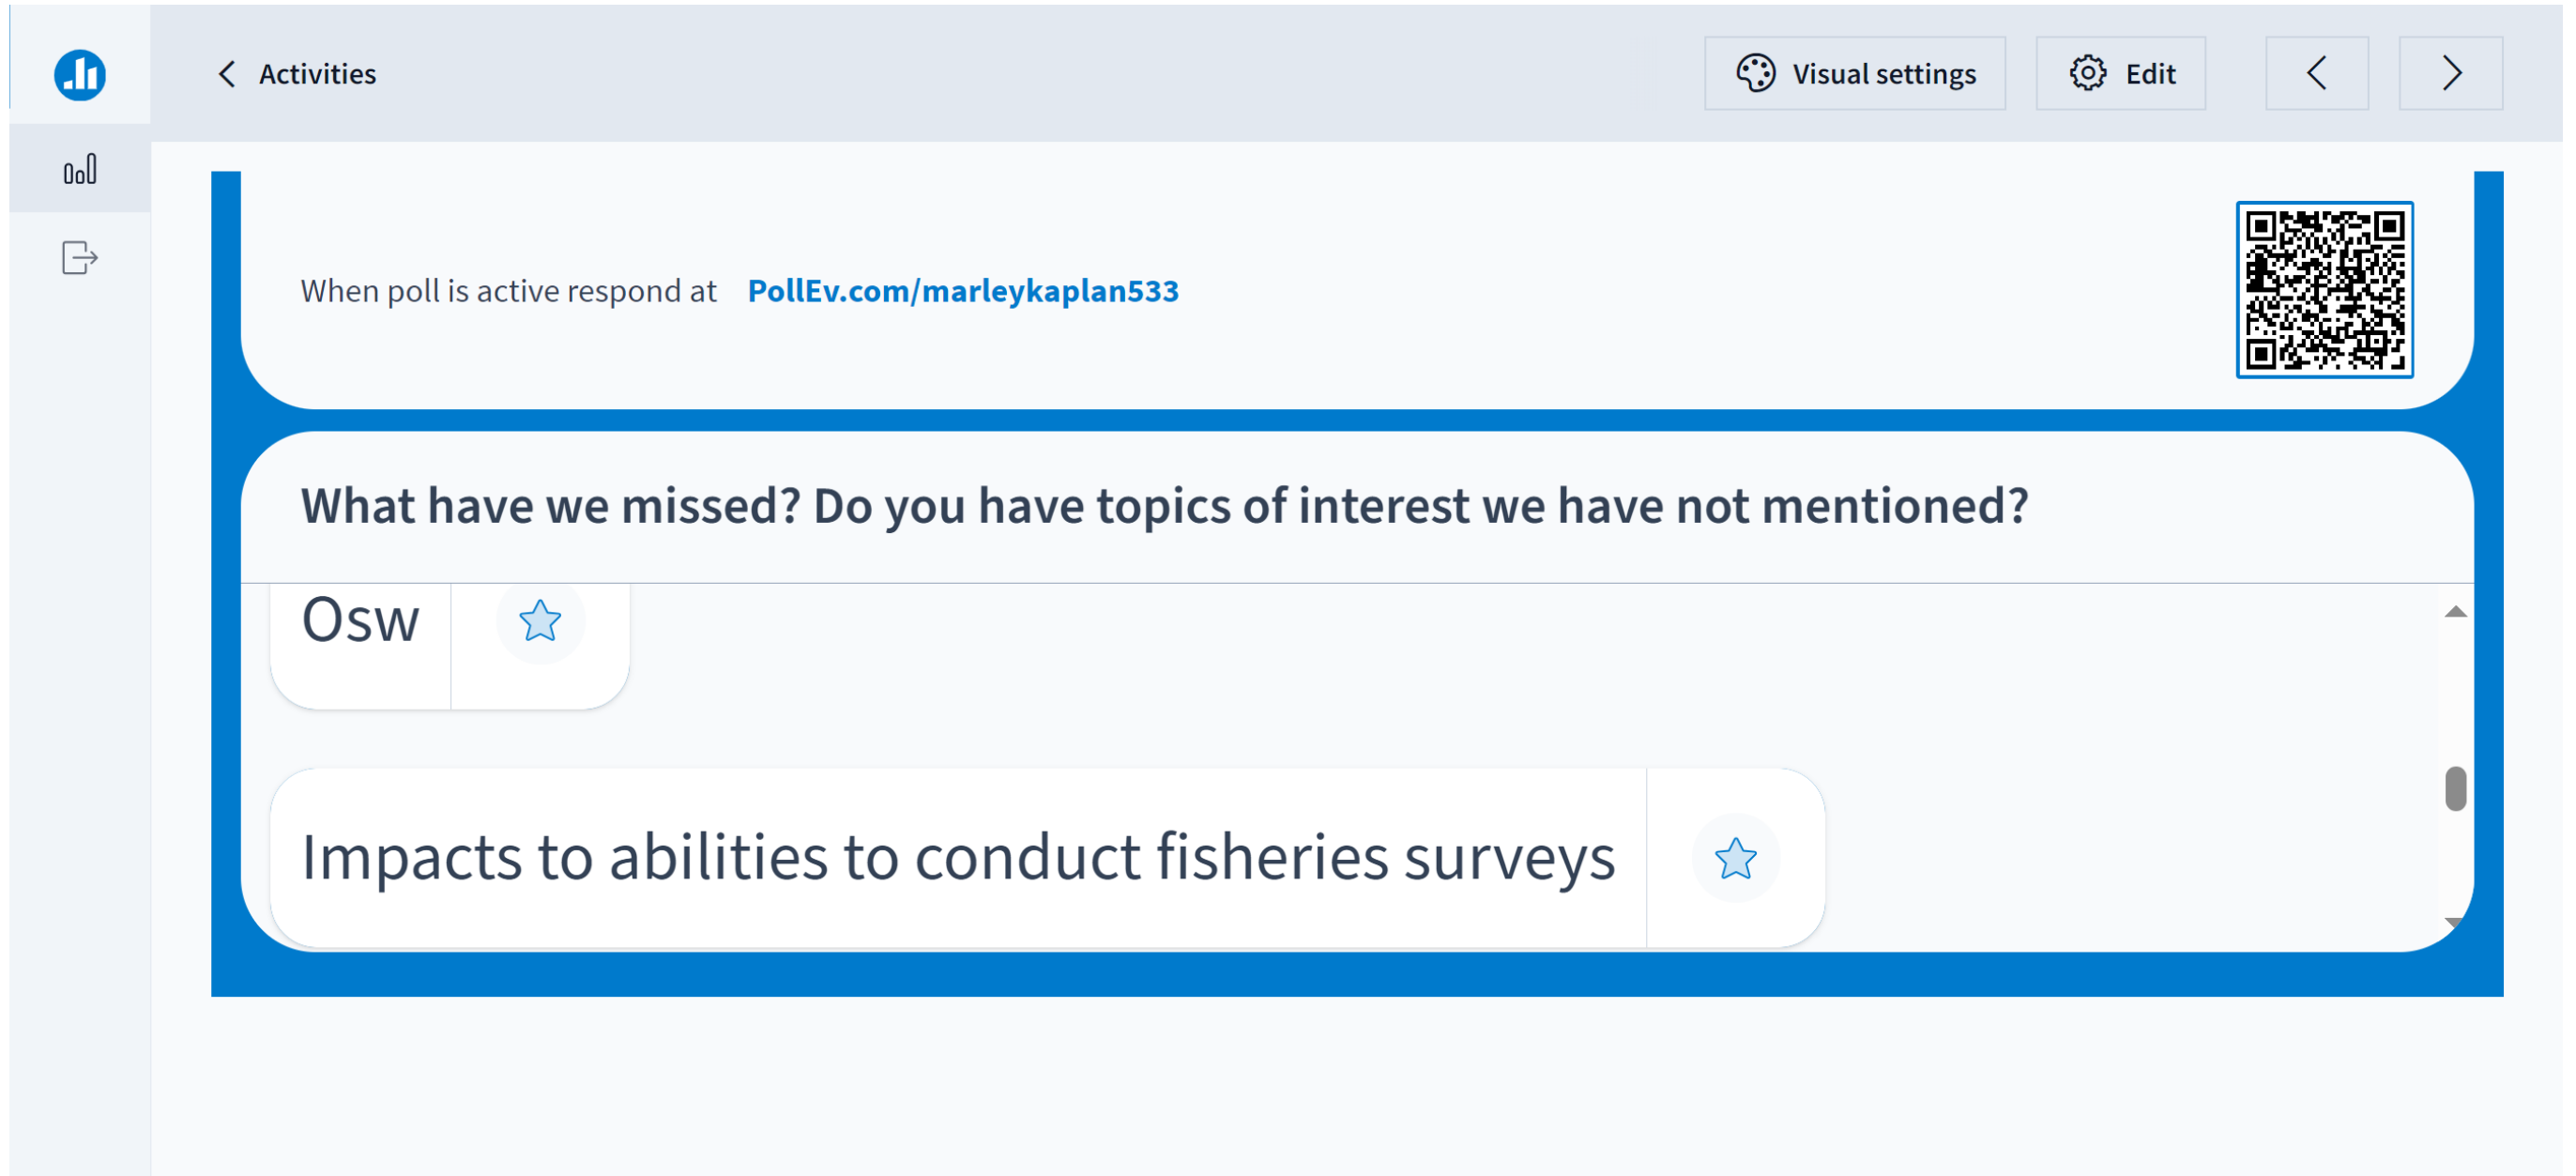

Which of the effects we presented is of greatest concern to you?

The screenshot shows a mobile application interface for a poll. At the top, there is a navigation bar with a bar chart icon, a back arrow, the text "Activities", and buttons for "Visual settings", "Edit", and navigation arrows. Below the navigation bar is a sidebar with a bar chart icon, a list icon, and a share icon. The main content area features a white box with a QR code and the text "When poll is active respond at PollEv.com/marleykaplan533". Below this is a large white box containing the poll question: "Which of the effects we presented is of greatest concern to you?". Underneath the question is a list of options, with "Marine life" being the first and most prominent option, accompanied by a star icon. A "SEE MORE" button with a downward arrow is located at the bottom of the list.

What have we missed? Do you have topics of interest we have not mentioned?

The screenshot shows a mobile application interface for a poll. At the top, there is a navigation bar with a bar chart icon, a back arrow, and the text "Activities". On the right side of the navigation bar are buttons for "Visual settings" (with a palette icon), "Edit" (with a gear icon), and navigation arrows. Below the navigation bar is a sidebar with a list icon and a share icon. The main content area has a white background with rounded corners and a blue border. It contains the text "When poll is active respond at PollEv.com/marleykaplan533" and a QR code. The poll question is "What have we missed? Do you have topics of interest we have not mentioned?". Below the question, there are two response options, each in a white rounded rectangle with a blue star icon on the right: "Osw" and "Impacts to abilities to conduct fisheries surveys".

MRE Educational Resources

- Provide resources for students of all ages to increase understanding of environmental effects of MRE
 - Updated in 2023
- New resources added:
 - Marine energy videos
 - ✓ Overview of Environmental Effects
 - ✓ Underwater Noise
 - ✓ Electromagnetic Fields
 - ✓ Changes in Habitat
 - Marine Energy Adventure: Collision Risk Game available
 - ✓ Play as fish to navigate collision risk!

Marine Renewable Energy Educational Resources

EDUCATIONAL RESOURCES

Environmental Effects of Marine Renewable Energy

OES ENVIRONMENTAL

Using clean, low-carbon energy sources is more important now than ever. As we combat climate change, marine renewable energy (MRE) has the potential to play an important role. However, we need to understand the impact tidal, wave, and ocean thermal energy devices may have on the environment in order to deploy MRE devices in a responsible manner.

OES-Environmental has compiled educational resources to increase awareness and understanding of MRE and associated environmental effects as well as support the future workforce. The materials and resources on this page can be used by students of all ages and educational backgrounds. Educators, schools, aquariums and zoos, science camps, etc. may also want to use this page for fun, educational content or to develop a classroom curriculum on environmental effects of MRE.

If you have any questions, suggestions, or would like to contribute to Tethys, please reach out to tethys@pnnl.gov.

What word comes to mind when you think of marine energy?

Nobody has responded yet.

Hang tight! Responses are coming in.

Next steps and conclusions

North Carolina wave energy stakeholder workshop in early 2024

Engaging with a wide spectrum of stakeholders on the U.S. Atlantic coast to:

- **increase awareness** of marine energy and its environmental and social effects
- **hear concerns** from stakeholders about marine energy
- **improve local knowledge** of marine energy
- **create local support** for the developing industry
