

Marine Renewable Energy and the Environment

Marine renewable energy devices generate electricity from the ocean's waves, tides, and currents. As these devices are installed in the ocean to provide renewable energy, it is possible that they could affect the marine environment. However, scientists and engineers are making sure animals and their habitats will not be harmed. As you look through the coloring pages, you will learn more about how marine renewable energy devices interact with the environment.

Find and color the animals and the marine renewable energy devices! How many different animals can you count?
